LIST OF PUBLICATIONS AND CITATIONS OF KÁLMÁN GYŐRY

BOOKS

[GY1] K. Győry, *Résultats effectifs sur la représentation des entiers par des formes décomposables.* Queen's Papers in Pure and Applied Math., No. **56**, Kingston, Canada, 1980.

1. A. Baker, *The Fermat equation and transcendence theory.* Number Theory related to Fermat's last theorem (Cambridge, Mass., 1981), p. 89-96. Progr. Math. 26, Birkhäuser, Boston, Mass. 1982, 91. old.
2. I. Gaál, *Norm form equations with several dominating variables and explicit lower bounds for inhomogeneous linear forms with algebraic coefficients.* Studia Sci. Math. Hungar., **19** (1984), 399-411.

*3. D. Bertrand, M. Emsalem, F. Gramain, M. Huttner, M. Langevin, M. Laurent, M. Mignotte, J. -C. Moreau, P. Philippon, E. Reyssat and M. Waldschmidt, *Les nombres transcendants.* Mémoire Soc. Math. France, No. 13, 1984.

4. I. Gaál, *Norm form equations with several dominating variables and explicit lower bouns for inhomogeneous linear forms with algebraic coefficients II.* Studia Sci. Math. Hungar., **20** (1985), 333-344.
5. J.-H. Evertse, *Upper bounds for the number of solutions of certain diophantine equations.* Séminaire de Théorie des Nombres, Paris, 1983-84. Birkhäuser Verlag, 1985, p. 71-90.
6. R. C. Mason, *Norm form equations I.* J. Number Th. **22** (1986), 190-207.
7. I. Gaál, *Inhomogeneous discriminant form and index form equations and their applications.* Publ. Math. Debrecen **33** (1986), 21-27.
8. B. Brindza, *Hiperelliptikus és exponenciális diofantikus egyenletek.* Kandidátusi értekezés. Debrecen, 1986.

*9. T. N. Shorey and R. Tijdeman, *Exponential diophantine equations.* Cambridge Tracts in Mathematics 87, Cambridge, 1986.

10. B. Brindza, *Zeros of polynomials and exponential diophantine equations.* Compositio Math., **61** (1987), 137-157.
11. I. Gaál, *Inhomogén széteső forma egyenletek és alkalmazásaik.* Egyetemi doktori értekezés, Debrecen, 1987.
12. B. Brindza, *On S-integral solutions of the Catalan equation.* Acta Arith. **48** (1987), 397-411.
13. I. Gaál, *Inhomogeneous discriminant form equations and integral elements with given discriminant over finitely generated integral domains.* Publ. Math. Debrecen **34** (1987), 109-122.
14. B. Brindza and I. Gaál, *Inhomogeneous norm form equations in two dominating variables over function fields.* Acta Math. Hungar., **50** (1987), 147-153.
15. R. C. Mason, *The study of Diophantine equations over function fields.* New advances in transcendence theory (Durham, 1986), pp 229-247. Cambridge Univ Press, Cambridge, 1988, l. 231. old.

The sign *x denotes book, monograph.
The sign x* denotes dependent citations.

16. I. Gaál, *Integral elements with given discriminant over function fields.* Acta Math. Hungar., **52** (1988), 133-146.

17. I. Gaál, *Inhomogeneous norm form equations over function fields.* Acta Arith. **51** (1988), 61-73.

18. I. Gaál, *On the resolution of inhomogeneous norm form equations in two dominating variables.* Math. Comp., **51** (1988), 359-373.

19. I. Gaál, *Szétesõ polinom egyenletek és alkalmazásaik.* Kandidátusi értekezés, Debrecen, 1989.

20. I. Gaál and N. Schulte, *Computing all power integral bases of cubic fields.* Math. Comp., **53** (1989), 689-696.

21. A. Pethő, *Diofantoszi egyenletek effektív és explicit megoldása.* Akadémiai doktori értekezés, Debrecen, 1990.

22. A. Pethő, *Computational methods for the resolution of diophantine equations.* Number Theory (R. A. Mollin ed.), Walter de Gruyter, Berlin-New York, 1990, p. 477-492.

23. I. Gaál, *On the computer resolution of index form equations.* Proc. Math. Conf. Kalsk, 1988, p. 21-27. Zielona Góra, 1990.

*24. Jean-Pierre Serre, *Lectures on the Mordell-Weil Theorem* (Translated and edited by Martin Brown from notes by Michael Waldschmidt), 2nd ed., Vieweg and Sohn, Braunschweig, Wiesbaden, 1990.

*25. M. E. Pohst, *Computational Algebraic Number Theory.* Birkhäuser Verlag, 1993.

26. N. P. Smart, *The solutions of triangularly connected decomposable form equations.* Mathematics of Comp., **64** (1995), 819-840.

27. Y. Bugeaud, *Formes linéaires de logarithmes et applications.* Thèse de Docteur, Strasbourg, 133 p. (1996)

*28. A. N. Parshin, I. R Shafarevich (eds.), *Number Theory IV. : Transcendental Numbers*, Springer, 1998. l. 193, 197-198, 200-201, 203. old.

*29. A. Pethő, *Algebraische Algorithmen.* Braunschweig/Wiesbaden: Verlag Vieweg, 1999.

30. L. Szalay, *Diophantine equations concerning linear recurrences.* PhD thesis, Debrecen, 1999.

31. Y. Bugeaud, *Fundamental systems of S-units with small height and their applications to diophantine equations.* Publ. Math. Debrecen **56** (2000), 279-292.

32. A. Bérczes, *On the number of solutions of index form equations.* Publ. Math. Debrecen **56** (2000), 251-262.

33. M. Waldschmidt, *Un Demi Siècle de Transcendence.* Development of mathematics 1950-2000 (Pier JP, ed.), Basel, Birkhäuser Verlag, 2000, p. 1121-1181. l. 11, 31, 33, 34, 36, 63-65, 68-69. old.

34. A. Bérczes, *On the number of solutions of norm form equations.* Period. Math. Hung. **43** (2001), 165-176.

35. A. Bérczes, *Some new diophantine results on decomposable polynomial equations and irreducible polynomials.* PhD értekezés, Debrecen, 73 p. (2001)

36. G. Wüstholz, *One century of logarithmic forms.* in: A Panorama of Number Theory, Cambridge, 2002, p. 1-10. l. 6. old.

37. P. Olajos, *Power integral bases in families of number fields.* PhD dissertation, Debrecen, 2004.

38. J. Ködmön, *Normaforma egyenletek alkalmazása a kriptográfiában.* PhD értekezés, Debrecen, 2004.

39. A. Bérczes, J. Ködmön and A. Pethő, *A one-way function based on norm form equations.* Period. Math. Hung. **49** (2004), 1-13.
40. I. Járási, *Constructive methods for diophantine equations.* PhD thesis, Debrecen, 2005.
41. Á. Pintér, *Binom Thue egyenletek, ternér egyenletek és polinomok hatványértékei*, MTA doktori értekezés, Debrecen, 2008.
42. A. Bérczes, *Újabb eredmények a diofantikus egyenletek elméletében*, Habilitációs cikkgyűjtemény, Debreceni Egyetem, 2009.
43. L. Hajdu, *Optimal systems of fundamental S-units for LLL-reduction*, Period. Math. Hung. **59** (2009), 53-79.
44. L. Hajdu, *Számtani sorozatok multiplikatív tulajdonságú halmazokban*, MTA doktori értekezés, Debrecen, 2009.
45. V. Koltunova, *On transcendence of irrationals with non-eventually periodic b-adic expansions*, Master Thesis, Univ. Waterloo, 2010.
46. I. Járási, *Computing small solutions of unit equations in three variables I: application to norm form equations*, (2012)
47. Cs. Bertók, L. Hajdu, *A Hasse-type principle for exponential diophantine equations and its applications*, Math. Comput. **85** (2016), 849-860.
48. N. Varga, *Figurális számok és diofantikus egyenletek*, PhD értekezés, Debreceni Egyetem (2016)
49. Cs. Bertók, L. Hajdu, *A Hasse-type principle for exponential diophantine equations over number fields and its applications*, Monatsh. Math. **187** (2018), 425-436.
50. Cs. Bertók, *Exponential diophantine equations and representation problems*, PhD dissertation, Debrecen, 2019.
51. T. Miyazaki, I. Pink, *Number of solutions to a special type of unit equations in two variables*, arXiv: 2006.15952 (2020)

[GY2] J.-H. Evertse and K. Győry, *Unit Equations in Diophantine Number Theory*, Cambridge University Press (2015)

1. P. H. Koymans, *The Catalan Equation*, Master Thesis, Leiden University, 2015.
2. A. Bérczes, *Effective results for Diophantine problems over finitely generated domains*, DSc dissertation, Debrecen (2016)
3. R. von Känel, B. Matschk, *Solving S-unit, Mordell, Thue-Mahler and generalized Ramanujan-Nagell equations via Shimura-Taniyama conjecture*, arXiv: 1605.06079 (2016)
4. A. Koutsianas, *Applications of S-unit equations to the arithmetic of elliptic curves*, PhD dissertation, University of Warwick (2016)
5. Y. Bugeaud, J.-H. Evertse, *S-parts of terms of integer linear recurrence sequences*, Mathematika **63** (2017), 840-851.
